

Innovative Access to Carbon Credits from Verified Global Projects

Investment Summary:

Sponsor is working directly with the developers of multiple carbon reduction, mitigation, and offset projects across several countries. These projects generate carbon credits that meet the sustainability and offset requirements of corporations, governments, and oversight organizations. Current offerings include:

- **Methane Capture Offsets** – credits generated from innovative technology used to cap oil and gas wells with significantly less or no carbon emissions. (Texas, USA).
- **Reforestation Credits** – generated from large-scale reforestation initiatives in Ohio.
- **Carbon Negative Food Production Credits** – from groundbreaking technology in food production. (Note: sponsor also holds equity in this project).

All credits are registered on industry-recognized platforms and verified by respected third-party verification organizations. Credits are available in multiple vintages, with flexibility for future delivery dates, and can be tailored to meet specific purchaser requirements. Pricing is negotiable.

Regular new offerings are available, expanding opportunities for buyers to meet evolving sustainability and compliance needs.

Investment Structure: Direct purchase of verified credits or equity-linked arrangements in selected projects.

Investment Sought: Flexible, depending on purchaser demand and negotiated pricing.

Projected Returns: Returns are driven by global demand for verified carbon credits, with potential upside as compliance requirements and corporate ESG commitments expand.
Use of Capital: Acquisition of carbon credits, equity stakes in select carbon-negative projects, and strategic partnerships with project developers.

Project Highlights

- **Global Growth Opportunity.** Credits available from a wide range of projects across industries and geographies. New offerings provided regularly.
- **Verified & Recognized.** All credits are issued on industry-recognized registries and validated by respected verification bodies.
- **Diversified Portfolio.** Opportunities span methane capture, reforestation, and carbon-negative technologies, offering buyers choice and diversification.
- **Tailored Solutions.** Multiple vintages and delivery structures available to meet specific corporate compliance and sustainability needs.
- **Alignment with ESG Goals.** Credits are designed to meet both voluntary sustainability targets and regulatory carbon offset requirements.
